

# Stretcher Integrated Limb Restraints

## Simple. Safe. Effective.

Restraining uncooperative patients is risky and one of the most difficult interventions we perform as medics. XDcuff is the only stretcher integrated limb restraint system that provides a concealed and strategically positioned access point for use in these emergencies. Eliminating a few steps in the process allows medics to control, treat and transport these patient types faster than ever before.

### Simple

XDcuff can be used with any stretcher and creates a standard location for tie-off points. Concealed design is invisible to the untrained eye.

### Safe

Simple strap adjustability and quick release buckles for emergent release. Standard location makes for quick and easy access in emergencies. Strategically placed attachment points minimize patient movement.

### Effective

Integrated anchors eliminate the need for loops and difficult quick release knots to be tied to the stretcher.

## XDcuff Benefits

- Allows medics to sedate, treat and transport uncooperative patients faster
- Prevent further patient medical complications due to treatment delays
- Reduced risk of injury to both patients and first responders
- Less overtime paid to replacement workers if injured
- Less legal liability

## Testimonials

“XD-CUFF deploys much faster than traditional restraint products. This speed allows us to treat and transport the uncooperative patient faster than before”

Lt. Jenny Nist

**St. Johns County Fire Rescue**

I’ve been in the EMS field for more than 25 years and the XDcuff is the safest most reliable limb restraint I have used. This restraint device will not only reduce injuries but also provide a faster and easier alternative to restrain patients in an emergency setting.

Lt. Kent Arceneaux

**Jacksonville Fire & Rescue**
